

AMENDMENT UNDER 37 C.F.R. 1.116**EXPEDITED PROCEDURE****EXAMINING GROUP 2193****PATENT****Application # 09/822,300****Attorney Docket # 2000P07515US01 (1009-087)****AMENDMENTS****AMENDMENTS TO THE CLAIMS**

1. (Currently Amended) A method for representing industrial automation computer program created using a graphical programming language, the method comprising the steps of:
identifying an internal representation of an industrial automation computer program, the industrial automation computer program adapted for use by controlling a programmable logic controller, the internal representation stored in a computer memory, the internal representation created via a graphical programming language; and
converting the internal representation to a markup language version of the industrial automation computer program.
2. (Previously Presented) The method according to claim 1, comprising the further step of causing the markup language version of the industrial automation computer program to be stored in a computer data storage device.
3. (Previously Presented) The method according to claim 1, further comprising the step of transmitting the markup language version of the industrial automation computer program over a network to a receiving computing device.
4. (Previously Presented) The method according to claim 2, comprising the further steps of retrieving the markup language version of the industrial automation computer program from the computer data storage device and converting the markup language version of the industrial automation computer program to the internal representation in computer memory.

AMENDMENT UNDER 37 C.F.R. 1.116**EXPEDITED PROCEDURE****EXAMINING GROUP 2193****PATENT****Application # 09/822,300****Attorney Docket # 2000P07515US01 (1009-087)**

5. (Previously Presented) The method according to claim 2, comprising the further steps of retrieving the markup language version of the industrial automation computer program from the computer data storage device and representing the retrieved industrial automation computer program as a corresponding graphical programming language version on a computer display.

6. (Previously Presented) The method according to claim 5, wherein the display of the markup language version of the industrial automation computer program is facilitated by a browser.

7. (Original) The method according to claim 2, wherein the markup language is XML.

8. (Original) The method according to claim 1, wherein the graphical programming language comprises a flowchart language.

9. (Original) The method according to claim 1, wherein the graphical programming language comprises a ladder logic language.

10. (Original) The method according to claim 1, wherein the graphical programming language comprises a function block diagram language.

11. (Original) The method according to claim 1, wherein the graphical programming language comprises a sequential function chart.

12. (Original) The method according to claim 7, wherein the graphical programming language comprises a flowchart language.

AMENDMENT UNDER 37 C.F.R. 1.116**EXPEDITED PROCEDURE****EXAMINING GROUP 2193****PATENT****Application # 09/822,300****Attorney Docket # 2000P07515US01 (1009-087)**

13. (Original) The method according to claim 7, wherein the graphical programming language comprises a ladder logic language.

14. (Original) The method according to claim 7, wherein the graphical programming language comprises a sequential function chart.

15. (Previously Presented) The method according to claim 7, wherein the graphical programming language comprises a function block diagram language.

16. (Previously Presented) The method according to claim 1, wherein the tool comprises an editor and the conversion is triggered by invoking an editor command.

17. (Previously Presented) The method according to claim 7, comprising the further steps of retrieving the markup language version of the industrial automation computer program from the computer data storage device and representing the retrieved industrial automation computer program as a corresponding graphical programming language version on a computer display.

18. (Previously Presented) The method according to claim 17, wherein the step of displaying the industrial automation computer program on a computer display device comprises the step of displaying the industrial automation computer program with the use of a browser.

19. (Currently Amended) A computer program product, for use in conjunction with a computing device, the computer program product comprising a computer usable medium, the computer usable medium comprising:

computer readable program code for identifying an industrial automation computer program adapted for use by controlling a programmable logic controller, the industrial automation

AMENDMENT UNDER 37 C.F.R. 1.116**EXPEDITED PROCEDURE****EXAMINING GROUP 2193****PATENT****Application # 09/822,300****Attorney Docket # 2000P07515US01 (1009-087)**

computer program created via a tool and stored in computer memory in the internal representation, the industrial automation computer program created using a graphical programming language;

computer readable program code for converting the identified industrial automation computer program from the internal representation to a markup language version of the industrial automation computer program.

20. (Previously Presented) The computer program product according to claim 19, the computer usable medium further comprising computer readable program code for causing the converted, markup language version of the industrial automation computer program to be stored in a computer data storage device.

21. (Previously Presented) The computer program product according to claim 20, the computer usable medium further comprising computer readable program code for causing retrieval of the markup language version of the industrial automation computer program from the computer data storage device and converting the markup language version of the industrial automation computer program to the internal representation in computer memory.

22. (Previously Presented) The computer program product according to claim 19, the computer usable medium further comprising computer readable program code for causing the transmission of markup language version of the industrial automation computer program over a network to a receiving computing device.

23. (Previously Presented) The computer program product according to claim 20, the computer program product further comprising computer readable program code for retrieving the markup language version of the industrial automation computer program from the computer data storage device and representing the retrieved industrial automation computer program as a

AMENDMENT UNDER 37 C.F.R. 1.116**EXPEDITED PROCEDURE****EXAMINING GROUP 2193****PATENT****Application # 09/822,300****Attorney Docket # 2000P07515US01 (1009-087)**

corresponding graphical programming language version on a computer display.

24. (Previously Presented) The computer program product according to claim 23, wherein the display of the markup language version of the code is facilitated by a browser.

25. (Original) The computer program product according to claim 19, wherein the markup language is XML.

26. (Original) The computer program product according to claim 19, wherein the graphical programming language comprises a flowchart language.

27. (Original) The computer program product according to claim 19, wherein the graphical programming language comprises ladder logic.

28. (Original) The computer program product according to claim 19, wherein the graphical programming language comprises function block diagrams.

29. (Original) The computer program product according to claim 19, wherein the graphical programming language comprises a sequential function chart.

30. (Original) The computer program product according to claim 25, wherein the graphical programming language comprises a flowchart language.

31. (Original) The computer program product according to claim 25, wherein the graphical programming language comprises a ladder logic language.

AMENDMENT UNDER 37 C.F.R. 1.116**EXPEDITED PROCEDURE****EXAMINING GROUP 2193****PATENT****Application # 09/822,300****Attorney Docket # 2000P07515US01 (1009-087)**

32. (Original) The computer program product according to claim 25, wherein the graphical programming language comprises a function block diagram language.

33. (Original) The computer program product according to claim 25, wherein the graphical programming language comprises a sequential function chart.

34. (Previously Presented) The computer program product according to claim 19, further comprising computer readable program code for converting the markup language version of the industrial automation computer program to the internal representation.

35. (Previously Presented) The computer program product according to claim 19, wherein the programming tool comprises an editor, and wherein the conversion is triggered by invoking an editor command in the graphical programming language editor.

36. (Currently Amended) A computer program product comprising a computer-readable storage medium having stored thereon ~~a representation of an industrial automation computer program as a~~ computer executable markup language version of ~~the an~~ an industrial automation computer program, the industrial automation computer program adapted for ~~use by~~ controlling a programmable logic controller, the industrial automation computer program created using a graphical programming language.

37. (Original) The computer program product according to claim 36, wherein the markup language is XML.

38. (Original) The computer program product according to claim 36, wherein the computer program product is coupled to a computing system that is remotely located from an industrial

AMENDMENT UNDER 37 C.F.R. 1.116**EXPEDITED PROCEDURE****EXAMINING GROUP 2193****PATENT****Application # 09/822,300****Attorney Docket # 2000P07515US01 (1009-087)**

automation control system.

39. (Currently Amended) A computer program product for permitting a user to create industrial automation computer programs, the product comprising a computer-readable storage medium having computer program code stored on it, the code comprising:

industrial automation graphical programming language code, the graphical programming language code comprising an editor adapted to permit the user to create an industrial automation computer program using graphical elements, the industrial automation computer program being stored in memory in an internal representation during execution, the industrial automation computer program adapted for ~~use by~~ controlling a programmable logic controller; and

computer program code for converting the industrial automation computer program, stored in memory in the internal representation, from the internal representation to a markup language version of the industrial automation computer program.

40. (Previously Presented) The computer program product according to claim 39, further comprising computer program code for converting the industrial automation computer program from the markup language version of the industrial automation computer program to the internal representation.

41. (Currently Amended) A method for communicating the logical structure of industrial automation computer program data in order to permit a plurality of application developers to create applications relating to the data, the method comprising the steps of:

creating a schema defining a content model for a markup language version of an industrial automation computer program converted from a graphical language version of the industrial automation computer program, the industrial automation computer program adapted for ~~use by~~ controlling a programmable logic controller; and

AMENDMENT UNDER 37 C.F.R. 1.116**EXPEDITED PROCEDURE****EXAMINING GROUP 2193****PATENT****Application # 09/822,300****Attorney Docket # 2000P07515US01 (1009-087)**

posting the schema for access over a network by the application developers.

42. (Original) The method according to claim 41, wherein the schema is an XML schema.

43. (Previously Presented) The method according to claim 41, wherein the industrial automation computer program data comprises flowchart programming instructions.

44. (Currently Amended) A method for providing an industrial automation computer program from a server system, over a network to which the server system is coupled, and to a client system also coupled to the network, the method comprising the steps of:

accessing a markup language version of the industrial automation computer program, the markup language version of the industrial automation computer program converted from a representation created using a graphical programming language, the industrial automation computer program adapted for ~~use by~~ controlling a programmable logic controller;

transmitting the markup language version of the industrial automation computer program over the network in connection with a network address corresponding to the client system, thereby causing the transmitted, markup language version of the industrial automation computer program to be received by the client system.

45. (Previously Presented) The method according to claim 44, wherein the client system, in response to the received markup language version of the industrial automation computer program, has transmitted to the server system data relating to the automation to which the markup language version of the industrial automation computer program is directed, and, further, wherein the server system has access to the industrial automation computer program modified in response to receipt of the data from the client system, and wherein the modified industrial automation computer program is provided in a markup language version, the method comprising the further step of:

AMENDMENT UNDER 37 C.F.R. 1.116**EXPEDITED PROCEDURE****EXAMINING GROUP 2193****PATENT****Application # 09/822,300****Attorney Docket # 2000P07515US01 (1009-087)**

transmitting the markup language version of the modified industrial automation computer program over the network in connection with a network address corresponding to the client system, thereby causing the transmitted, modified, markup language version of the industrial automation computer program to be received by the client system.

46. (Previously Presented) The method according to claim 45, wherein the step of transmitting the accessed, markup language version of the industrial automation computer program over the network comprises sending an electronic mail message.

47. (Previously Presented) The method according to claim 45, wherein the step of transmitting the accessed, markup language version of the industrial automation computer program over the network comprises transmitting the code over the network via hypertext transfer protocol.

48. (Previously Presented) The method according to claim 44, wherein the markup language version of the industrial automation computer program comprises XML.

49. (Previously Presented) The method according to claim 44, wherein a second client system is coupled to the network, the method further comprising the step of:

transmitting the accessed, markup language version of the industrial automation computer program over the network in connection with a network address corresponding to the second client system, thereby causing the transmitted, markup language version of the industrial automation computer program to be received by the second client system.

50. (Previously Presented) The method according to claim 49, wherein the first client system is configured to reconvert the markup language version of the industrial automation

AMENDMENT UNDER 37 C.F.R. 1.116**EXPEDITED PROCEDURE****EXAMINING GROUP 2193****PATENT****Application # 09/822,300****Attorney Docket # 2000P07515US01 (1009-087)**

computer program to a first internal representation, and wherein the second client system is coupled to the network, the second client configured to reconvert the markup language version of the industrial automation computer program to a second internal representation.

51. (Currently Amended) A method for programming industrial automation control applications comprising the steps of:

providing a computer system coupled to a network;
configuring the first computer system to receive over the network transmissions of data from a plurality of industrial automation program developer systems; and
receiving data from the plurality of industrial automation program developer systems, the data comprising an industrial automation computer program presented in a markup language version, the markup language version of the industrial automation computer program converted from a representation created using a graphical programming language, the industrial automation computer program adapted for ~~use by~~ controlling a programmable logic controller.

52. (Original) The method according to claim 51, wherein the markup language is XML.
